Summary

Final-year Software Engineering student targeting a Solution Architect role, with hands-on experience building full-stack applications, event-driven microservices and AWS infrastructure. Focused on cost-conscious architecture, asynchronous AI processing, automated delivery and cloud security.

Education, Certificates & Awards

- **Sai Gon University** (2023 – 2027)
  Software Engineering – **CPA: 3.65/4.0**
- **Academic Awards:** Six scholarships at the highest award level.
- **TOEIC:** 905

Skills

Languages: Java, C#, JavaScript/TypeScript, Python, PHP
Web & Mobile: Spring Boot, .NET, Express.js, FastAPI, React, Next.js, React Native, Flutter, Tailwind CSS
Data & Messaging: PostgreSQL, MySQL, Supabase, Kafka, RabbitMQ, pgvector
Cloud & DevOps: AWS, Docker, Kubernetes, GitHub Actions, Nginx, Git, Linux

Experience

FWD Vietnam Technology Company (FWD VTC) Jun 2026 – Sep 2026
Software Developer Intern

- Applied the AI workflow skills to structure an Agile procedure in software development, translated requirements into specifications, implementation plans, and technical documentation, then presented proposals to the team lead for approval.
- Built a fullstack mobile application with a React Native/TypeScript client and backend services; collaborated with the team to clarify requirements and evaluate implementation options.
- Designed a modular, maintainable architecture that balanced system requirements with infrastructure costs.
- Debugged application issues, tested core user flows, and reduced application latency by 40%.

Projects

Findie – AI-Powered Sematic Search Lost-and-Found Platform [GitHub] Sep 2026 – Oct 2026
.NET, Python, React, TypeScript, PostgreSQL, pgvector, RabbitMQ, Docker

- Built a lost-and-found platform that helps users find and reclaim items through text or images with AI assistances, with ownership claims, messaging, and handover workflows.
- Decoupled .NET business APIs from a Python AI service and used RabbitMQ to connect AI tasks, indexing jobs, and results asynchronously.
- Implemented hybrid semantic and keyword search with PostgreSQL/pgvector, separating business and search data for relevant item discovery.

Instory – Social Media Platform [GitHub] [Live Demo] Mar 2026 – May 2026
.NET, React, PostgreSQL, SignalR, AWS, Docker, GitHub Actions

- Built a social platform with real-time chat, call and notifications; designed its AWS deployment across EC2, private RDS, S3, and CloudFront, with infrastructure defined in CloudFormation.
- Created a GitHub Actions CI/CD pipeline for dependency installation, linting, tests, coverage reports, production builds, and Docker image publishing to ECR; automated SSM deployments with health checks and rollback.
- Secured deployments with GitHub OIDC, scoped IAM roles, Secrets Manager, and private S3 access; configured security groups for CloudFront-to-EC2 ingress and EC2-to-RDS access.

Medify – Microservices Medical Platform [GitHub] Oct 2025 – Dec 2025
Spring Boot, Next.js, PostgreSQL, Kafka, API Gateway, Docker, Kubernetes

- Built a multi-tenant clinic management platform for managing doctor availability and scheduling patient appointments.
- Designed event-driven microservices with a database per service and Kafka-based communication to decouple business domains and distribute data ownership.
- Containerized services with Docker and used Kubernetes for orchestration and autoscaling to match demand in cloud deployments.
